

Wetlands Bureau Decision Report

Decisions Taken
01/03/2011 to 01/09/2011

DISCLAIMER:

This document is published for information purposes only and does not constitute an authorization to conduct work. Work in jurisdiction may not commence until the applicant has received a posting permit.

Decisions are subject to appeal, and are reviewed by the federal agencies for compliance with Section 404 of the Federal Clean Water Act.

APPEAL:

I. Any affected party may ask for reconsideration of a permit decision in accordance with RSA 482-A:10,II within 30 days of the Department's issuance of a decision. Requests for reconsideration should:

- 1) describe in detail each ground for complaint. Only grounds set forth in the request for reconsideration can be considered at subsequent levels of appeal;
- 2) provide new evidence or information to support the requested action;
- 3) Parties other than the applicant, the town, or contiguous abutters must explain why they believe they are affected; and
- 4) Be mailed to the DES Wetlands Bureau, PO Box 95, Concord, NH 03302-0095.

II. An appeal of a decision of the department after reconsideration may be filed with the Wetlands Council in accordance with RSA 482-A:10, IV within 30 days of the department's decision. Filing of the appeal must:

- 1) be made by certified mail to George "Chip" Kimball, Chairperson, Wetlands Council, PO Box 95, Concord, NH 03302-0095 (a copy should also be sent to the DES Wetlands Bureau);
- 2) contain a detailed description of the land involved in the department's decision; and
- 3) set forth every ground upon which it is claimed that the department's decision is unlawful or unreasonable.

MAJOR IMPACT PROJECT

2006-00968

HILLTOP PARTNERSHIP

CENTER HARBOR Squam Lake

Requested Action:

Applicant requests the permit be amended to include the repairs of the existing structures.

Conservation Commission/Staff Comments:

No Com Com comments by July 17, 2006

NH NHI and NH Fish and Game will not be submitting comments

APPROVE AMENDMENT:

Amend permit to read: Construct a 6 ft x 30 ft piling pier accessed by a 6 ft x 5 ft walkway and repair two 7 ft x 12 ft cribs, two 8 ft x 12 ft cribs and a 26 ft x 35 ft boathouse and associated permanent docks providing 8 existing slips on 2,136 ft of frontage on Squam Lake, in Center Harbor.

With Conditions:

1. All work shall be in accordance with plans by Watermark Marine Construction dated December 22, 2010, as received by the Department on December 28, 2010.
2. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to installation.
3. These shall be the only structures on this water frontage and all portions of the docking structures shall be at least 20 ft from abutting property lines or the imaginary extension of those lines into the water.
4. Pilings shall be spaced a minimum of 12 ft apart as measured center to center.
5. The repairs shall maintain the size, location and configuration of the pre-existing structures.
6. This permit to replace or repair existing structures shall not preclude the DES from taking any enforcement action or revocation action if the DES later determines that the structures represented as "existing" were not previously permitted or grandfathered.
7. All construction related debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
8. Appropriate siltation, erosion, and turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
9. Work authorized shall be carried out such that discharges shall be avoided in spawning or nursery areas during spawning seasons, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
10. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding and nesting areas shall be avoided.
11. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This project is classified as a major project per Rule Env-Wt 303.02(d), modification of a major docking facility.
2. The applicant has 2,136 feet of frontage along Squam Lake.
3. A maximum of 29 slips may be permitted on this frontage per Rule Env-Wt 402.12, Frontage Over 75'.
4. The modified docking facility will provide 9 slips as defined per RSA 482-A:2, VIII and therefore meets Rule Env-Wt 402.12.
5. Public hearing is waived with the finding that the project impacts will not significantly impair the resources of Squam Lake.
6. The existing boathouse over public waters fails to conform to the current rules pertaining to shoreline structures as stated in Chapter Env-Wt 400.
7. The proposed pier will be a completely separate structure and the total square foot construction area, over public waters, of the existing and proposed structures will not exceed that of new, conforming, structures which could be allowed under the current rules, therefore Rule Env-Wt 402.21, Modification of Existing Structures is waived.

-Send to Governor and Executive Council-

**2009-02136 TILTON DPW, TOWN OF
TILTON Packer Brook**

Requested Action:

Amendment proposal to change from an open bottom box to a four sided embedded box culvert and add stream diversion and erosion control plan.

APPROVE AMENDMENT:

Dredge and fill approximately 843 sq. ft. of streambed, bank and associated wetlands (includes 402 sq. ft. of temporary impacts) for removal of an approximately 6 ft. span x 5.25 ft. high x 24 ft. run open bottom box culvert and replace with a 6 ft. span x 6 ft. 6 in. high x 39 ft. closed bottom box culvert with staggered baffles, embedded 1.25 ft. with a 50/50 mixture of angular and natural round stone and installation of associated wing-walls and bank and bed stabilization.

With Conditions:

1. All work shall be in accordance with plans by Holden Engineering & Surveying, Inc., dated September 7, 2010, and report dated September 14, 2010, as received by DES on September 14, 2010 and as revised by shop drawings by White Mountain Precast, LLC revision date of December 8, 2010 with narratives by Holden Engineering & Surveying date December 16, 2010 and Hiltz Construction, LLC dated December 28, 2010, as received by DES on December 30, 2010.
2. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
3. The final surface of the stream channel bed shall be restored with natural round stone or existing streambed materials and shall not include angular rip-rap.
4. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
6. Cofferdams shall not be installed during periods of high flow, whether due to seasonal runoff or precipitation. Once a cofferdam is fully effective, confined work can proceed without restriction.
7. Prior to commencing work on a substructure located within surface waters, a cofferdam shall be constructed to isolate the substructure work area from the surface waters.
8. Temporary cofferdams shall be entirely removed immediately following construction.
9. The Permittee shall monitor the weather and will not commence work within flowing water, including the installation of cofferdams, when rain is in the forecast.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
12. All in-stream work shall be conducted in a manner that minimizes the duration of construction in the watercourse.
13. Work shall be conducted in a manner so as to minimize turbidity and sedimentation.
14. Dewatering of work areas or of dredge materials, if required, shall be conducted in a manner so as to prevent turbidity.
15. A qualified professional shall monitor the project during construction to assure it is constructed in accordance with the approved plans and narratives and to assure no water quality violations occur. A post-construction report documenting the status of the restored streambed and banks shall be submitted to the Wetlands Bureau within 60 days of the completion of construction.
16. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid. Faulty equipment shall be repaired immediately.
17. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each

operator shall be trained in its use.

18. All refueling of equipment shall occur outside of surface waters or wetlands during construction.

With Findings:

DES reaffirms findings 1 through 7 with additional findings.

1. This is a major impact project per Administrative Rule Env-Wt 903.01(g) A project shall be classified as a major impact project if:

(1) The stream crossing is a new or replacement tier 3 crossing;

2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.

3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.

4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

5. The NH Fish and Game Department did not comment on the originally proposed project.

6. The applicant's professional engineer has provided a stamped report indicating that the previously approved structure would increase downstream flooding and the alternative design will emulate existing conditions and minimize the potential for downstream impacts.

7. The revised project was reviewed as an alternative design per Env-Wt 904.09 and addresses the purpose of the Stream Crossing rules per Env-Wt 901.01.

8. The approval has been conditioned on monitoring to assure no water quality violations occur and that the project is constructed in accordance with the approved plans and narratives.

9. DES has not received any abutter or public comments in objection to the proposed project.

10. DES has not received any comments from the Conservation Commission.

11. In accordance with RSA 428-A:8, DES finds that the requirements for a public hearing do not apply as the permitted project is not of substantial public interest, and will not have a significant impact on or adversely affect the values of the riverine resource, as identified under RSA 482-A:1.

2010-02765 NH DEPT OF TRANSPORTATION
ERROL Tributary To Androscoggin River

Requested Action:

Relocate 2,800 linear feet of NH Route 16 to a new alignment further from the river impacting 11,950 sq. ft. of palustrine and riverine wetlands.

Conservation Commission/Staff Comments:

Cons. Comm. - no comment

APPROVE PERMIT:

Relocate 2,800 linear feet of NH Route 16 to a new alignment further from the river impacting 11,950 sq. ft. of palustrine and riverine wetlands. NHDOT project #15925

With Conditions:

1. All work shall be in accordance with plans by CHA for NHDOT Bureau of Highway Design dated 9/15/2010, as received by the Department on Oct. 4, 2010.

2. This permit is contingent upon the submission of a project specific stream diversion and erosion control plans to the DES Wetlands Bureau at least 10 working days in advance of the meeting to be held as required by permit condition #3. Those plans shall be complete and shall include details regarding the timing and method of stream flow diversion during construction, and shall show the temporary siltation, erosion and turbidity control measures to be implemented.

3. At least 48 hours prior to the start of construction, a pre-construction meeting shall be held with NHDES Land Resources Management Program staff at the project site, at the NHDES Office in Concord, N.H. or NHDOT Office in Concord, N.H. to review the conditions of this wetlands permit. It shall be the responsibility of the permittee to schedule the pre-construction meeting, and the meeting shall be attended by the permittee, his/her professional engineer(s), wetlands scientist(s), and the contractor(s)

responsible for performing the work.

4. Construction equipment shall not be located within surface waters.
5. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; and c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
6. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
7. Within three days of the last activity in an area, all exposed soil areas, where construction activities are complete, shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack on slopes steeper than 3:1 or netting /matting and pinning on slopes steeper than 2:1.
8. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching or if temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching, mulching with tack on slopes steeper than 3:1 and stabilized by matting and pinning on slopes steeper than 2:1.
9. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
10. Extreme precautions to be taken within riparian areas to limit unnecessary removal of vegetation during road construction and areas cleared of vegetation to be revegetated as quickly as possible.
11. There shall be no further alteration to wetlands or surface waters without amendment of this permit.
12. Standard precautions shall be taken to prevent import or transport of soil or seed stock from nuisance, invading species such as purple loosestrife or Phragmites.
13. After removal of the pavement from the abandoned roadbed, the area shall be revegetated as soon as possible.
14. Plantings along the riverbank shall be incorporated into the design as discussed at the July 21, 2010 Natural Resource Agency Coordination Meeting.
15. Written permission from each property owner impacted by this project, whether temporary or permanent, shall be gained by the applicant prior to construction.
16. Dredged material shall be placed out of the DES Wetlands Bureau jurisdiction.

With Findings:

1. This is a major impact project per Administrative Rule Env-Wt 303.02(i), alteration of more than 200 linear feet of stream channel or banks.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a), Requirements for Application Evaluation, has been considered in the design of the project.
5. On Oct. 13, 2010, DES Staff conducted a field inspection of a similar project located approximately 4 miles southerly of this application. That file, 2010-02241, has the same issues and needs along the same roadway and impacting the same river system. Field inspection determined the relocation of the road before there are major erosion issues is a proactive approach. In this case, some of the wetlands / ditchlines will be replaced and the loss of less than 10,000 sq. ft. of wetlands does not require mitigation.
6. In accordance with RSA 428-A:8, DES finds that the requirements for a public hearing do not apply as the permitted project is not of substantial public interest, and will not have a significant impact on or adversely affect the values of the palustrine and riverine resources, as identified under RSA 482-A:1.

2010-03369 TARBELL FAMILY REVOC TRUST
CONCORD Rattlesnake Brook

Requested Action:

Proposal to dredge and fill approximately 198 sq. ft. of an existing concrete lined and granite block fortified stream bed and bank that carries Rattlesnake Brook along and under a historic mill complex "Mill Place West" apartments. Work includes enlarging the existing sluiceway and removing a stream restriction point under the building.

APPROVE PERMIT:

Dredge and fill approximately 198 sq. ft. of an existing concrete lined and granite block fortified stream bed and bank that carries Rattlesnake Brook along and under a historic mill complex "Mill Place West" apartments. Work includes enlarging the existing sluiceway and removing a stream restriction point under the building.

With Conditions:

1. All work shall be in accordance with plans and narratives by Donald F. Mayo, and Stoney Ridge Environmental, LLC, as received by the NH Department of Environmental Services (DES) on December 16, 2010.
2. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
3. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
4. Work shall be done during low flow.
5. A qualified professional shall monitor the project during construction to assure it is constructed in accordance with the approved plans and narratives and to assure no water quality violations occur. A follow-up report shall be submitted to the Wetlands Bureau within 60 days of the completion of construction.
6. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
7. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
8. Within three days of final grading, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
9. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
10. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
11. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
12. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid prior to entering surface waters or wetlands. Faulty equipment shall be repaired immediately.
13. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.
14. All refueling of equipment shall occur outside of surface waters or wetlands during construction.

With Findings:

1. This is a major impact project per Administrative Rule Env-Wt (g) A project shall be classified as a major impact project if:
 - (1) The stream crossing is a new or replacement tier 3 crossing.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The site and existing apartments have been flooded during storms of 2006 and 2007.
4. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
5. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
6. The project has been designed to more closely match the upstream and downstream channel width increasing storm flow passage to enhance public safety.
7. Due to the existing design, infrastructure and location the replacement/changes to the crossing and channel were designed as an Alternative Design per Administrative Rule Env-Wt 904.09.
8. The design has been prepared by a New Hampshire Licensed Professional Engineer and it is indicated that the new design will approach passage of a 100-year storm event reducing flooding and improving public safety.
9. The applicant's agents have been in consultation with the City of Concord's Professional Engineer about the project and the City's adjacent culvert replacement project. The City's Engineer has provided a letter (e-mail dated 12/2/2010) of support for the proposed project.
10. DES has not received any abutter or public comments in objection to the proposed project.

11. DES has not received any comments from the Concord Conservation Commission.
12. In accordance with RSA 428-A:8, DES finds that the requirements for a public hearing do not apply as the permitted project is not of substantial public interest, and will not have a significant impact on or adversely affect the values of the riverine resource, as identified under RSA 482-A:1.

2010-03396 TOWN OF BEDFORD
BEDFORD Riddle Brook

Requested Action:

Proposal to impact approximately 1885 sq. ft. (includes 802 sq. ft. temporary impact) of stream bed and banks (Riddle Brook) to repair an existing approximately 13'-5" span x 8'-5" high x 82' run corrugated metal plate arch (CMPA) culvert. Work includes temporary stream diversion, erosion turbidity and sedimentation controls and installation of a 6" concrete invert with associated cutoff walls and culvert bed stabilization.

APPROVE PERMIT:

Dredge and fill approximately 1885 sq. ft. (includes 802 sq. ft. temporary impact) of stream bed and banks (Riddle Brook) to repair an existing approximately 13'-5" span x 8'-5" high x 82' run corrugated metal plate arch (CMPA) culvert. Work includes temporary stream diversion, erosion turbidity and sedimentation controls and installation of a 6" concrete invert with associated cutoff walls and culvert bed stabilization.

With Conditions:

1. All work shall be in accordance with plans and narratives by McFarland Johnson, Inc., plans dated December 2010 and narratives, as received by the NH Department of Environmental Services (DES) on December 20, 2010.
2. The Town shall obtain temporary construction easements or written agreements from affected landowners with work in jurisdiction on their property or within 20 feet of their property. Copies shall be supplied to DES Wetlands Bureau File No. 2010-03396 prior to construction.
3. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
4. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
5. Work shall be done during low flow.
6. A qualified professional shall monitor the project during construction to assure it is constructed in accordance with the approved plans and narratives and to assure no water quality violations occur. A follow-up report shall be submitted to the Wetlands Bureau within 60 days of the completion of construction.
7. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
8. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
9. Within three days of final grading, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
10. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
11. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
12. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
13. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid prior to entering surface waters or wetlands. Faulty equipment shall be repaired immediately.
14. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.
15. All refueling of equipment shall occur outside of surface waters or wetlands during construction.

With Findings:

1. This is a major impact project per Administrative Rule Env-Wt (g) A project shall be classified as a major impact project if:
(1) The stream crossing is a new or replacement tier 3 crossing.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The road (Wallace Road) is currently closed because NHDOT has determined that the culvert crossing is structurally unsafe.
4. The road closer has resulted in a three mile detour.
5. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
6. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
7. The applicant has investigated three repair options consisting of: Option 1: Paved/concrete invert; Option 2: Slip-lining; and Option 3: Structure replacement.
8. The applicant chose Option 1 due to the lower cost, possible future permitting requirements, short duration of engineering through construction and less anticipated impacts to natural resources.
9. It was estimated by the applicant that the replacement cost for the structure would be \$775,000.00 dollars vs. \$245,000.00 dollars for the chosen option.
10. As a result of the cost and other noted constraints it was determined that replacement of the crossing in accordance with Administrative Rule Env-Wt 904.08 would not be practicable. Therefore, the crossing repair was designed as an Alternative Design per Administrative Rule Env-Wt 904.09.
11. A New Hampshire Licensed Professional Engineer conducted a hydrological analysis of the existing conditions and proposed repair options/conditions. It was found that both repair options decrease the existing headwater elevation, slightly increases outlet velocities and slightly improve the headwater to depth ratio for the 50 and 100-year storm events.
12. DES has not received any abutter or public comments in objection to the proposed project.
13. DES has been notified that the Bedford Conservation Commission voted to support the application as presented.
14. In accordance with RSA 428-A:8, DES finds that the requirements for a public hearing do not apply as the permitted project is not of substantial public interest, and will not have a significant impact on or adversely affect the values of the riverine resource, as identified under RSA 482-A:1.

MINOR IMPACT PROJECT

2009-01904 LONDONDERRY, TOWN OF
LONDONDERRY Beaver Brook

Requested Action:

Applicant requests to: Amend approved plans to reflect minor changes that do not change the wetland impacts.

Conservation Commission/Staff Comments:

No comments were received from the Londonderry Conservation Commission on this application.

APPROVE AMENDMENT:

Dredge and fill a total of 2,475 sq. ft., of which 600 sq. ft. are permanent impacts, in the flow channel, embankments, and palustrine scrub-shrub wetlands, of a tributary to Beaver Brook, to replace an existing 36 in. CMP roadway culvert with a 8'x5'x48' box culvert at the same location.

With Conditions:

1. Amended condition: All work shall be in accordance with plans by Stantec Consulting Services Inc. dated 10/19/2010 as received by the Department on November 4, 2010.
2. Any further alteration of areas on this property that are within the jurisdiction of the DES Wetlands Bureau will require a new

application and further permitting by the Bureau.

3. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, maintained during construction, and remain until the area is stabilized. Silt fencing must be removed once the area is stabilized.
4. Unconfined work within the stream, exclusive of work associated with installation of a cofferdam, shall be done during periods of low flow.
5. Cofferdams shall not be installed during periods of high flow, whether due to seasonal runoff or precipitation. Once a cofferdam is fully effective, confined work can proceed without restriction.
6. Prior to commencing work on a substructure located within surface waters, a cofferdam shall be constructed to isolate the substructure work area from the surface waters.
7. Temporary cofferdams shall be entirely removed immediately following construction.
8. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
9. Proper headwalls shall be installed.
10. Culvert outlets shall be properly rip rapped.
11. Work shall be done during low flow.

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(l).
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provide evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

2010-02142 CELKO JR, WILLIAM
TAMWORTH Tributary To

Requested Action:

Dredge and fill 1,605 square feet of wetlands and streams for access to telecommunication tower.

APPROVE PERMIT:

Dredge and fill 1,605 square feet of wetlands and streams for access to telecommunication tower.

With Conditions:

1. All work shall be in accordance with the plans entitled AT&T NH12618 Tamworth Farm (Sheets T-1, C-1, C-2, C-3, C-4, C-5) as received by DES December 09, 2010.
2. Work shall be done during periods of non-flow.
3. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.
4. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
6. Culverts shall be laid at original grade.
7. Proper headwalls shall be constructed within seven days of culvert installation.
8. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
9. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
10. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be

stabilized within 14 days by seeding and mulching.

11. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.

12. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid. Faulty equipment shall be repaired immediately.

13. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, per RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland after July 1, 2008.

With Findings:

1. This is a minor project per Env-Wt 303.03 (l) Projects that alter the course of or disturb less than 200 linear feet of an intermittent or perennial nontidal stream or river channel or its banks and do not meet the criteria for minimum impact under Env-Wt 303.04(n). For intermittent streams, this distance shall be measured along the thread of the channel. For perennial streams or rivers, the total disturbance shall be calculated by summing the lengths of disturbances to the channel and the banks;
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.
5. The stream crossings were designed to accommodate the 50-year flood frequency.
6. The applicant has requested a waiver per Env-Wt 204.03, to the requirement that the department shall limit the location of a project to at least 20 feet from an abutting property line or imaginary extension thereof over surface water unless it receives written agreement from the affected abutter concurring with any impact that may result relative to the abutter's as required by Env-Wt 304.04 (a).
7. The applicant has attempted to get permission from the abutting property owner tax map/lot 414/11. Two letters have been sent requesting approval from the owner of tax map/lot 414/11. The agent spoke with the owner of tax map/lot 414/11 and they did not appear to have any problem with the impact location.
8. The impacts are downslope of the abutter and pose no change in water flow or other impacts to tax map/lot 414/11.
9. Relocating the access road to meet the 20-foot setback would increase the overall impact to the environment.
10. The waiver is granted in accordance with Env-Wt 204.04(b), as strict compliance with the rule will provide no benefit to the public and will cause an operational or economic hardship to the applicant.
11. No comments were submitted from the NHFG Nongame and Endangered Wildlife Program or the Natural Heritage Bureau

2010-02444 POLLACK, ALAN
WASHINGTON Island Pond

Requested Action:

Install a 4 ft x 12 ft wharf 50 ft from the northeast property line on 544 ft of frontage of Island Pond in Washington.

APPROVE PERMIT:

Install a 4 ft x 12 ft wharf 50 ft from the northeast property line on 544 ft of frontage of Island Pond in Washington.

With Conditions:

1. All work shall be in accordance with plans by Alan Pollack received by the NH Department of Environmental Services (DES) on December 30, 2010.
2. This permit shall not be effective until it has been recorded with the county Registry of Deeds Office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau by certified mail, return receipt requested, prior to installation.
3. This structure and the separate, pre-existing 15 ft x 24 ft wharf shall be the only structures on this water frontage and all portions of the structures shall be at least 20 ft from abutting property lines or the imaginary extension of those lines into the water.
4. No portion of the wharf shall extend more than 4 feet from the shoreline at full lake elevation.
5. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for

obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(d), construction of docking structures that exceed the criteria of Rule Env-Wt 303.04 (a) but provide fewer than five slips.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

2010-02461 NEW HARBOR PROPERTIES INC
LONDONDERRY Unnamed Wetland

Requested Action:

Impact 9,300 square feet of jurisdictional palustrine emergent/forested wetland to provide adequate parking, meet zoning setbacks, and maintain an existing detention pond outlet for two (2) new office buildings.

Conservation Commission/Staff Comments:

The Londonderry Conservation Commission 'recommended approval of the application as presented'.

APPROVE PERMIT:

Impact 9,300 square feet of jurisdictional palustrine emergent/forested wetland to provide adequate parking, meet zoning setbacks, and maintain an existing detention pond outlet for two (2) new office buildings.

With Conditions:

1. All work shall be in accordance with plans by Benchmark Engineering, Inc. dated August 20, 2010, as received by the NH Department of Environmental Services (DES) on September 14, 2010.
2. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require approval by the Bureau.
3. DES Southeast Region staff shall be notified in writing prior to commencement of work and upon its completion.
4. Work shall be done during seasonal low flow conditions.
5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
6. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
7. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for other any construction related activities.
8. Within three days of final grading, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
9. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
10. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
11. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(h) Projects involving less than 20,000 square feet of alteration in the aggregate in nontidal wetlands, nontidal surface waters, or banks adjacent to nontidal surface waters which exceed the criteria of Env-Wt 303.04(f).

2. The impacts are necessary to meet local zoning setbacks, provide needed parking, and to perform maintenance to an existing detention pond, therefore; the need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
6. A memo from the NH Natural Heritage Bureau ("NHB") NHB10-1268 dated 6/1/2010 (the "Memo") was included with the application. The memo identified one vertebrate species within the vicinity of the project: Wood Turtle (*Glyptemys insculpta*).
7. DES received an email dated September 15, 2010 from the NH Fish and Game, Nongame and Endangered Species Program ("NHFG") in response to the memo. NHFG "does not expect impacts to the species as a result of the proposed project."
8. On September 24, 2010, DES received written correspondence from the Londonderry Conservation Commission (the "LCC") dated September 16, 2010. The LCC "recommended approval of the application as presented."

2010-02810 POLMONARI, LISA MARIE
WAKEFIELD Great East Lake

Requested Action:

Permanently remove an existing 5 ft x 22 ft seasonal dock, permanently remove two 6 ft x 7 ft concrete slabs from the lake bed, install a 6 ft x 40 ft seasonal dock connected to a 7 ft x 3 ft concrete pad and install a seasonal boat lift in the westerly slip on an average of 99 ft of frontage on Great East Lake, in Wakefield.

Conservation Commission/Staff Comments:

Con Com signed Exp application

APPROVE PERMIT:

Permanently remove an existing 5 ft x 22 ft seasonal dock, permanently remove two 6 ft x 7 ft concrete slabs from the lake bed, install a 6 ft x 40 ft seasonal dock connected to a 7 ft x 3 ft concrete pad and install a seasonal boat lift in the westerly slip on an average of 99 ft of frontage on Great East Lake, in Wakefield.

With Conditions:

1. All work shall be in accordance with plans by Fogg Environmental Design dated November 16, 2010, as received by the NH Department of Environmental Services (DES) on December 29, 2010.
2. This permit shall not be effective until it has been recorded with the county Registry of Deeds Office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau by certified mail, return receipt requested, prior to installation.
3. This shall be the only structure on this water frontage and all portions of the dock shall be at least 20 ft from abutting property lines or the imaginary extension of those lines into the water.
4. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
6. The concrete anchor pad shall be constructed landward of the shoreline defined by the elevation of normal high water and located entirely behind the natural undisturbed shoreline.
7. Seasonal pier shall be removed from the lake for the non-boating season.
8. No portion of the pier shall extend more than 40 feet from the shoreline at full lake elevation.
9. The seasonal boat lift shall be removed for the non-boating season.
10. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(g), removal of no more than 20 cubic yards of material from the lake bed.
2. The applicant has an average of 99 feet of shoreline frontage along Great East Lake.

3. A maximum of 2 slips may be permitted on this frontage per Rule Env-Wt 402.13, Frontage Over 75'.
4. The proposed docking facility will provide 2 slips as defined per RSA 482-A:2, VIII and therefore meets Rule Env-Wt 402.13.

2010-02832 LIBBY, DEBORAH/TYLER
WASHINGTON Millen Lake

Requested Action:

The Applicant requests reconsideration of the Department's November 15, 2010 decision to deny the application to repair a foundation wall on the grounds that Lake level has been altered.

Inspection Date: 11/29/2010 by Jeffrey D Blecharczyk

APPROVE RECONSIDERATION:

Reconsider and approve permit to: Impact the bank and lakebed to repair the foundation of a primary structure on 172 ft of frontage, on Millen Lake, in Washington.

With Conditions:

1. All work shall be in accordance with plans by Moser Engineering dated September 26, 2010, and Trexler Engineering dated September 15, 2010, as received by the NH Department of Environmental Services (DES) on October 18, 2010.
2. The repairs shall maintain the size, location and configuration of the pre-existing residential structure.
3. All construction related debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
4. Appropriate siltation, erosion, and turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
5. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
7. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding areas and spawning areas shall be avoided.
8. Within three days of final grading or temporary suspension of work, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
9. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(a), because it does not meet the criteria of Rule Env-Wt 303.02, Rule Env-Wt 303.04, nor of Rule Env-Wt 303.02
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01. 3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. Review of DES Dam Bureau records has found that the residential structure does not extend beyond the shoreline of any public water or publicly-owned water body that would cause it to be subject to RSA 482-A:26.

2010-03222 WENTWORTH FAMILY REVOCABLE TRUST
MOULTONBOROUGH Lake Winnepesaukee

Requested Action:

Permanently remove an existing seasonal dock, install a 6 ft x 48 ft piling supported permanent dock with two tie off piles in the southern slip, install a permanent boat lift in the southern slip, and a 14 ft x 30 ft seasonal canopy over the southern slip, install a 3

pile ice cluster in front of the dock, install 2 seasonal PWC lifts in along the shoreline, and repair a total of 89 linear feet of retaining walls with existing rocks on an average of 124 feet of frontage, on Lake Winnepesaukee, in Moultonborough.

Conservation Commission/Staff Comments:

Con Com submitted comments about possible removal of trees or shrubs

APPROVE PERMIT:

Permanently remove an existing seasonal dock, install a 6 ft x 48 ft piling supported permanent dock with two tie off piles in the southern slip, install a permanent boat lift in the southern slip, and a 14 ft x 30 ft seasonal canopy over the southern slip, install a 3 pile ice cluster in front of the dock, install 2 seasonal PWC lifts in along the shoreline, and repair a total of 89 linear feet of retaining walls with existing rocks on an average of 124 feet of frontage, on Lake Winnepesaukee, in Moultonborough.

With Conditions:

1. All work shall be in accordance with plans by Ames Associates dated November 01, 2010, as received by the NH Department of Environmental Services (DES) on November 29, 2010.
2. This permit shall not be effective until it has been recorded with the county Registry of Deeds Office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau, by certified mail, return receipt requested, prior to construction.
3. The wall repairs shall maintain the size, location and configuration of the pre-existing structures.
4. This permit to replace or repair existing structures shall not preclude the DES from taking any enforcement action or revocation action if the DES later determines that the structures represented as "existing" were not previously permitted or grandfathered.
5. All construction related debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
6. This permit does not allow for maintenance dredging.
7. The minimum clear spacing between piles shall be 12 feet.
8. The dock shall not extend more than 48 ft lakeward at full lake elevation of 504.32.
9. Appropriate siltation, erosion, and turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
10. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
11. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding areas and spawning areas shall be avoided.
12. Canopies shall be of seasonal construction type with a flexible fabric cover. The seasonal support frame shall be designed to be removed for the non-boating season. The flexible fabric cover shall be removed during all seasons of non-use.
13. Seasonal PWC lifts shall be removed for the non-boating season.
14. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(d), construction of a docking system that exceeds the criteria for minimum impact docking structures.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01. 3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. The applicant submitted fetch calculations to support the request for a permanent dock at this location.
6. The applicant has an average of 124 feet of shoreline frontage along Lake Winnepesaukee.
7. A maximum of 2 slips may be permitted on this frontage per Rule Env-Wt 402.13, Frontage Over 75'.
8. The proposed docking facility will provide 2 slips as defined per RSA 482-A:2, VIII and therefore meets Rule Env-Wt 402.13.

Requested Action:

Permanently reduce a 22 ft long dock to 21 ft 4 inches and add 2 tie off piles to a 7 ft x 31 ft 8 inch dock with a 3 ft 4 inch x 21 ft 4 inch dock in a "L" shaped configuration connected to a 7 ft x 31 ft 8 inch dock by a 4 ft x 10 ft walkway in a "U" shaped configuration, on Lake Winnepesaukee, in Alton.

Conservation Commission/Staff Comments:

Con Com signed Exp application, however minor project (m)

APPROVE PERMIT:

Permanently reduce a 22 ft long dock to 21 ft 4 inches and add 2 tie off piles to a 7 ft x 31 ft 8 inch dock with a 3 ft 4 inch x 21 ft 4 inch dock in a "L" shaped configuration connected to a 7 ft x 31 ft 8 inch dock by a 4 ft x 10 ft walkway in a "U" shaped configuration, on Lake Winnepesaukee, in Alton.

With Conditions:

1. All work shall be in accordance with plans by Winnepesaukee Marine Construction dated December 10, 2010, as received by the NH Department of Environmental Services (DES) on December 16, 2010.
2. This permit shall not be effective until it has been recorded with the county Registry of Deeds Office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau, by certified mail, return receipt requested, prior to construction.
3. The repairs shall maintain the size, location and configuration of the pre-existing structures.
4. This permit to replace or repair existing structures shall not preclude the DES from taking any enforcement action or revocation action if the DES later determines that the structures represented as "existing" were not previously permitted or grandfathered.
5. All construction related debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
6. Appropriate siltation, erosion, and turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
7. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
8. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding areas and spawning areas shall be avoided.
9. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(m), the addition of tie off piles which do not add a slip.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01. 3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant is reducing the square feet of dock over surface waters of an existing dock thus addressing Env-Wt 402.21.

MINIMUM IMPACT PROJECT

2010-03105 KEHAS, ELINOR
NEW DURHAM Merrymeeting Lake

Requested Action:

Replace 76 linear ft of retaining wall, relocate a 3 ft wide set of concrete steps, remove a 6 ft x 10 ft "deck", and install a 6 ft x 40 ft seasonal pier on an average of 448 ft of frontage on Merrymeeting Lake in New Durham.

APPROVE PERMIT:

Replace 76 linear ft of retaining wall, relocate a 3 ft wide set of concrete steps, remove a 6 ft x 10 ft "deck", and install a 6 ft x 40 ft seasonal pier on an average of 448 ft of frontage on Merrymeeting Lake in New Durham.

With Conditions:

1. All work shall be in accordance with plans by Folsom Design Group as revised January 4, 2011, and received by the NH Department of Environmental Services (DES) on January 5, 2010.
2. This permit shall not be effective until it has been recorded with the county Registry of Deeds Office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau, by certified mail, return receipt requested, prior to construction.
3. The repairs shall maintain the size, location and configuration of the pre-existing structures.
4. This permit to replace or repair existing structures shall not preclude the DES from taking any enforcement action or revocation action if the DES later determines that the structures represented as "existing" were not previously permitted or grandfathered.
5. All construction related debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
6. Appropriate siltation, erosion, and turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
7. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
8. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding areas and spawning areas shall be avoided.
9. The retaining wall shall be constructed completely within, or landward of, the pre-existing wall so as not to create land in public water.
10. The seasonal pier shall be the only docking structure on this water frontage and all portions of the structure shall be at least 20 ft from abutting property lines or the imaginary extension of those lines into the water.
11. The seasonal pier shall be removed from the lake for the non-boating season.
12. No portion of the pier shall extend more than 40 feet from the shoreline at full lake elevation.
13. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minimum impact project per Administrative Rules Env-Wt 303.04(a), and Env-Wt 303.04(c), installation of a 2-slip seasonal pier and repair of an existing retaining wall in the dry.
2. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

EXPEDITED MINIMUM

2010-03315 REED, CATHERINE
STRAFFORD Bow Lake

Requested Action:

Repair "in kind" an existing 100 feet of retaining wall with no change in location or configuration on Bow Lake, Strafford.

Conservation Commission/Staff Comments:

Con Com signed Exp Application

APPROVE PERMIT:

Repair "in kind" an existing 100 feet of retaining wall with no change in location or configuration on Bow Lake, Strafford.

With Conditions:

1. All work shall be in accordance with plans by Meadowbrook Stoneworks, as received by the NH Department of Environmental Services (DES) on December 09, 2010.
2. This permit does not allow dredging for any purpose.
3. Work shall be done during drawdown.
4. Repair shall maintain existing size, location and configuration.
5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
6. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. This is a minimum impact project per Administrative Rule Env-Wt 303.04(c), repair existing retaining walls in kind.

2010-03328 MANCHESTER PARKS & RECREATION, CITY OF
MANCHESTER Black Brook

Requested Action:

Proposal to conduct additional river bank stabilization associated with the Maxwell Pond Dam removal and Black Brook restoration project in Manchester.

APPROVE PERMIT:

Dredge and fill 13,140 sq. ft. stream bank, bed and associated wetlands (includes 7,755 sq. ft. of temporary impacts) to conduct additional river bank stabilization associated with the Maxwell Pond Dam removal and Black Brook restoration project in Manchester.

With Conditions:

1. All work shall be in accordance with plans by Dubois & King Inc., dated November 2010, as received by the NH Department of Environmental Services (DES) on December 9, 2010.
2. This permit is contingent on review and approval, by the DES Wetlands Bureau, of final stream diversion/erosion control plans. Those plans shall detail the timing and method of stream flow diversion during construction, and show temporary siltation/erosion/turbidity control measures to be implemented.
3. Work shall be done during low flow.
4. All seeding and plantings shall be native plant species and all fertilizers used within the protected shoreland shall consist of low

phosphate and slow release nitrogen fertilizer.

5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
6. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
7. Cofferdams shall not be installed during periods of high flow, whether due to seasonal runoff or precipitation. Once a cofferdam is fully effective, confined work can proceed without restriction.
8. Prior to commencing work on a substructure located within surface waters, a cofferdam shall be constructed to isolate the substructure work area from the surface waters.
9. Temporary cofferdams shall be entirely removed immediately following construction.
10. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
11. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
12. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
13. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
14. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
15. All proposed plantings shall have at least 75% success after two (2) growing seasons, or the site shall be replanted and re-established in a manner satisfactory to the DES Wetlands Bureau.
16. Any mulch used during the project shall be straw and precautions shall be taken to assure the mulch does not include invasive species such as purple loosestrife (*Lythrum salicaria*) and common reed (*Phragmites australis*).
17. A post-construction report documenting the status of the project area with photographs shall be submitted to the Wetlands Bureau within 60 days of the completion of construction and after one full growing season.
18. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid. Faulty equipment shall be repaired immediately.
19. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.
20. All refueling of equipment shall occur outside of surface waters or wetlands during construction.
21. All activities shall be in accordance with the Comprehensive Shoreland Protection Act, per RSA 483-B.

With Findings:

1. This is a minimum impact project per Administrative Rule Env-Wt 303.04(t) Restoration of altered or degraded wetlands provided the project:
 - (1) Receives financial support and direct supervision of a New Hampshire state agency, the US Environmental Protection Agency, the US Army Corps of Engineers, the US Natural Resources Conservation Service, or the US Fish and Wildlife Service;
 - (2) Shall not be used to perform restoration in cases where the applicant is subject to a removal or restoration order;
 - (3) Is not located in or adjacent to prime wetlands; and
 - (4) Does not meet the criteria of Env-Wt 303.02(k).
2. The previous dam removal and stream restoration has and continues to be been overseen by NHDES Watershed Management Bureau.
3. The project is being funded through Section 319 of the Clean Water Act with federal funding provided by the US Environmental Protection Agency.
4. The need for the proposed impacts has been demonstrated by the applicant per Env-Wt 302.01.
5. The bank along the left side of Black Brook just upstream of the former dam site has now become unstable and the additional river bed and bank work is needed to prevent further erosion, protect the surrounding habitat and public and private infrastructure.
6. The project is associated with previous permits issued by the DES Wetlands Bureau File #2008-1384 and #2008-02768. These projects consisted of removal of an unsafe dam, with a focus on restoration of the impaired surface water created by the dam and removal of the migratory barrier to fish within the Black Brook and from the adjacent Merrimack River.

7. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
8. The work consists of stabilization of the bank with large boulders, chinking stones and plantings.
9. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

PERMIT BY NOTIFICATION

2011-00004 LAFRENIERE, LAWRENCE/LISA
MOULTONBOROUGH Lake Winnepesaukee

Requested Action:

Repair non docking structures in kind.

Conservation Commission/Staff Comments:

Con Com signed PBN form

PBN IS COMPLETE:

Repair non docking structures in kind.

With Findings:

1. This is a minimum impact project per Administrative Rule Env-Wt 303.04(x), repair of non-docking structures in kind.

CSPA PERMIT

2010-03080 LASHER, HULDAH
PORTSMOUTH Portsmouth Harbor

Requested Action:

Impact 304 sq ft for the purpose of constructing a new accessory structure and installing a pervious driveway.

APPROVE PERMIT:

Impact 304 sq ft for the purpose of constructing a new accessory structure and installing a pervious driveway.

With Conditions:

1. All work shall be in accordance with revised material submitted by Dean Telfer and received by the Department of Environmental Services ("DES") on October 10, 2010.
2. No more than 38.0% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from DES.
3. There shall be no impacts within wetlands, surface waters, or their banks until any permit as may be required under RSA 482-A has been obtained.
4. All pervious technologies used shall be designed, installed and maintained to effectively absorb and infiltrate stormwater.
5. All activities conducted in association with the completion of this project shall be conducted in a manner that complies with applicable criteria of Administrative Rules Chapter Env-Wq 1400 and RSA 483-B during and after construction.
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.

8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Ws 1700 or successor rules in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. Silt fencing must be removed once the area is stabilized.
13. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement or revocation action if the DES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

CSPA PERMIT W/WAIVER

2010-02805 CONNELLY, ANN/NEIL
SPOFFORD Spofford Lake

Requested Action:

Impact 13,818 sq ft for the purpose of expanding a nonconforming primary structure and installing a new septic system and stormwater controls.

APPROVE PERMIT:

Impact 13,818 sq ft for the purpose of expanding a nonconforming primary structure and installing a new septic system and stormwater controls.

WAIVER APPROVED: RSA 483-B:9, II (b), is waived to expand an existing non-conforming structure located within the 50 ft primary building setback to Spofford Lake.

With Conditions:

1. All work shall be in accordance with revised plans submitted by Don Scott and received by the Department of Environmental Services ("DES") on December 29, 2010.
2. This approval includes a waiver of RSA 483-B:9, II (b) and, therefore, shall not be effective until it has been recorded at the appropriate Registry of Deeds and a copy of the recorded waiver is sent to the department by certified mail, return receipt requested.
3. No more than 18.56% of the area of the lot within the protected shoreland shall be composed of impervious surfaces unless additional approval is obtained from DES.
4. This permit is contingent upon receiving all necessary approvals from the NH DES Subsurface Systems Bureau and installing the proposed septic system.
5. The proposed stormwater treatment measures shall be designed, installed and maintained to effectively intercept and infiltrate

- stormwater. 6. All pervious technologies used shall be designed, installed and maintained to effectively absorb and infiltrate stormwater.
7. No impacts to natural ground cover shall occur within the waterfront buffer.
8. There shall be no impacts within wetlands, surface waters, or their banks until any permit as may be required under RSA 482-A has been obtained.
9. At least 4,614 sq ft of the Natural Woodland Buffer beyond the primary building setback must remain in an unaltered state in order to remain compliant with RSA 483-B:9, V, (b), (2).
10. Orange construction fencing shall be placed at the limits of construction to prevent accidental encroachment on areas determined to remain in an unaltered state.
11. All activities conducted in association with the completion of this project shall be conducted in a manner that complies with applicable criteria of Administrative Rules Chapter Env-Wq 1400 and RSA 483-B during and after construction.
12. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
13. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
14. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Ws 1700 or successor rules in Env-Wq 1700.
15. Any fill used shall be clean sand, gravel, rock, or other suitable material.
16. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
17. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
18. Silt fencing must be removed once the area is stabilized.

With Findings:

1. The existing non-conforming structure is located within the 50 ft primary building setback to Spofford Lake and, therefore, fails to conform to the setback restriction set forth in RSA 483-B:9, II (b), of the CSPA.
2. In accordance with RSA 483-B:11, II, the commissioner shall review proposals which are more nearly conforming than the existing structures, and may waive some of the standards specified in RSA 483-B:9, so long as there is at least the same degree of protection provided to the public waters and the proposal is "more nearly conforming."
3. The applicant has proposed to install stormwater controls consisting of 3 new vegetative treatment swales that will be constructed with native plantings.
4. The applicant has proposed to install a new NH DES Subsurface Bureau approved wastewater treatment system.
5. The applicant has proposed to install significant stormwater measures and install a new septic system, and therefore, meets the requirements for a waiver of RSA 483-B:9 as described in RSA 483-B: 11, I.

2010-02835 GOLDSMITH, GARY
BELMONT Lake Winnisquam

Requested Action:

Impact 4,643 sq ft for the purpose of expanding a nonconforming primary structure.

APPROVE PERMIT:

Impact 4,643 sq ft for the purpose of expanding a nonconforming primary structure.

WAIVER APPROVED: RSA 483-B:9, II(b) is waived to allow the expansion of a primary structure that encroaches upon the primary building setback.

With Conditions:

1. All work shall be in accordance with plans submitted by Gary Goldsmith and received by the Department of Environmental

Services ("DES") on October 15, 2010.

2. This approval includes a waiver of RSA 483-B:9, II (b) and, therefore, shall not be effective until it has been recorded at the appropriate Registry of Deeds and a copy of the recorded waiver is sent to the department by certified mail, return receipt requested.
3. No more than 10.13% of the area of the lot within the protected shoreland shall be composed of impervious surfaces unless additional approval is obtained from DES.
4. This permit is contingent upon receiving all necessary approvals from the NH DES Subsurface Systems Bureau.
5. The proposed stormwater treatment measures shall be designed, installed and maintained to effectively intercept and infiltrate stormwater.
6. No impacts to natural ground cover shall occur within the waterfront buffer.
7. There shall be no impacts within wetlands, surface waters, or their banks until any permit as may be required under RSA 482-A has been obtained.
8. In order to remain compliant with RSA 483-B:9, V,(b),(2), at least 8,273 sq ft of the Natural Woodland Buffer beyond the primary building must remain in an unaltered state.
9. Orange construction fencing shall be placed at the limits of construction to prevent accidental encroachment on areas determined to remain in an unaltered state.
10. All activities conducted in association with the completion of this project shall be conducted in a manner that complies with applicable criteria of Administrative Rules Chapter Env-Wq 1400 and RSA 483-B during and after construction.
11. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
12. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
13. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Ws 1700 or successor rules in Env-Wq 1700.
14. Any fill used shall be clean sand, gravel, rock, or other suitable material.
15. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
16. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
17. Silt fencing must be removed once the area is stabilized.

With Findings:

1. The existing non-conforming structure is located within the 50 ft primary building setback to Lake Winnisquam and, therefore, fails to conform to the setback restriction set forth in RSA 483-B:9, II (b), of the CSPA.
2. In accordance with RSA 483-B:11, II, the commissioner shall review proposals which are more nearly conforming than the existing structures, and may waive some of the standards specified in RSA 483-B:9, so long as there is at least the same degree of protection provided to the public waters and the proposal is "more nearly conforming."
3. The applicant has proposed to install rain gutters that will be capable of directing stormwater to at least four, 27 cubic foot dry wells.
4. The applicant has proposed to construct a berm that will direct driveway stormwater to vegetated areas.
5. The applicant has proposed to install sound stormwater controls, and therefore, meets the requirements for a waiver of RSA 483-B:9 as described in RSA 483-B: 11, I.
